

## Charcoal Class

The start of the Summer Term brought with it new topics in our subjects. In Science we started to look at states of matter and what classifies something as a liquid, gas or solid with a variety of investigations being carried out in the science lab eg to see if a material can be dissolved in water. PE and we have been practising different skills that may come in useful for Sports Day. We have created landscapes using a variety of mediums - eg chalk, clay and junk modelling. In Discovery, we have travelled to Australia and New Zealand to learn about these countries. We are also beginning to think about our future with a variety of career workshops including one about apprenticeships. We also like playing Uno.
