

Charcoal Class Monthly Update: April 2023

In Discovery we have been learning about the Romans and the story of Romulus and Remus. We also looked at what 'Empire' means and what countries were owned by the Roman Empire. I was quite impressed with how much the students could recall!

Congratulations!

In Maths we have started looking at angles; what they are and finding them in 2D shapes. The students were great at finding angles around the classroom!

In Science we have been looking at 'Magnets and Forces'. The students were able to mime out the different forces and started naming objects that might be magnetic.

Charcoal and Orange had a session with Jane from JCP, working on how to make a good impression and the different ways we communicate. Here are some photographs of the students working on their professional handshake.
